FOR IMMEDIATE RELEASE

CATrak Anti-Theft Solution Prevents Theft and Enables Recovery of \$100,000 Vehicle

Los Angeles, 6/1/23 - CATrak Technologies, a pioneer in next-generation anti-theft solutions for the transportation industry, successfully assisted the CEO of Chelax Industries to swiftly recover his stolen Limited Edition 2022 Dodge RAM 1500 4WD TRX. The advanced CATrak Anti-Theft device installed on the vehicle provided real-time theft alerts and ongoing GPS coordinates to the authorities..

In the early morning on 6/1/23, thieves forcefully entered the vehicle, immediately found and removed the OEM GPS system and stole the truck from his driveway. However, thanks to the CATrak system installed the prior week, the owner used the CATrak mobile application to track the perpetrators.

In a coordinated effort between the Huntington Beach Police Department, the Los Angeles Sheriff's Department, CHP, and the CATrak Product, the stolen vehicle was tracked in real-time using the CATrak app. Once thieves attempted to strip the Dodge of its catalytic converter, the mounted siren was activated and the LAPD, waiting outside, raided the facility.

The owner expressed his gratitude for the CATrak Anti-Theft Solution, "Having our vehicle recovered is a relief, but the true value lies in CATrak's ability to protect fleet operators like me from costly downtime, revenue loss, and the theft of valuable components like catalytic converters. I never expected to become a spokesperson for this product, but recent events have demonstrated its effectiveness."

Mark Richardi, CEO of CATrak Technologies emphasized how their advanced anti-theft solution provides peace of mind and proactive protection for transportation assets, including catalytic converters. CATrak remains at the forefront of IoT innovation, revolutionizing the anti-theft landscape in the transportation industry. "Our commitment to cutting-edge technology and customer satisfaction have established CATrak as the preferred choice for Catalytic Converter anti theft solutions industrywide."
