FOR IMMEDIATE RELEASE

### **CATrak Technologies' Anti Theft Solution Leads to Arrest of Catalytic Converter Thief**

CATrak Technologies, Inc. announced today that their proprietary SMART tracking system led to the arrest of a thief attempting to steal multiple catalytic converters from a customer's yard in Montreal, Canada. During the theft the CATrak audible siren was activated and SMS text alerts were sent to the appropriate parties in real time. This incident is a testament to the effectiveness of CATrak Technologies' patented next-generation anti-theft solution of protecting vehicle fleet owners from financial losses and maintaining continuing operations of their vehicles.

The incident occurred when the Fleet Manager of one of the largest bus operators in Montreal received a "THEFT IN PROGRESS" message from CATrak's anti-theft system. The owner had installed CATrak on their vehicles after being hit by theft three previous times, costing them over \$15K per converter. The owner then contacted the authorities and provided them with the location information provided on the app. Upon notification, law enforcement officials were able to locate the thief, obtain a search warrant and recover the stolen converter, ensuring that the fleet owner did not suffer any major financial losses as a result of the theft.

"We are thrilled to hear that our solution prevented multiple catalytic converter thefts, minimized cost, and played a crucial role in the arrest of this thief," said Jean Poulin, President of OLIJEL, CATrak Technologies, Inc. exclusive distributor in Canada. "Our system is designed to provide vehicle fleet owners with peace of mind and real-time alerts when their catalytic converters are at risk of being stolen. This incident is a testament to the effectiveness of our technology in combating this growing global problem."

CATrak Technologies' tracking system can be fitted to any make or model of vehicle and utilizes SMART technology to track the location of the catalytic converter, alerting the owner immediately if any unauthorized tampering or removal occurs.
